Solutions to Assignment 01

"I Aten't Dead"

**Name:**

**Conspirators:**

---

1. An amuse-bouche for scaling, to signal the flavors ahead:

Examine current weight lifting records for the snatch, clean and jerk, and the total for scaling with body mass (three regressions). Do so for both women and men's records.

For weight classes, take the upper limit for the mass of the lifter.

Wikipedia is an excellent source.

- (a) How well does  $2/3$  scaling hold up?
- (b) Normalized by the scaling you determine, who holds the overall, rescaled world record?

Normalization here means relative:

$$100 \times \left( \frac{M_{\text{worldrecord}}}{cM_{\text{weightclass}}^{\beta}} - 1 \right),$$

where  $c$  and  $\beta$  are the parameters determined from a linear fit.

**Solution:**

□

2. Some kitchen table preparation for for power-law size distributions:

Consider a random variable  $X$  with a probability distribution given by

$$P(x) = cx^{-\gamma}$$

where  $c$  is a normalization constant, and  $0 < a \leq x \leq b$ . ( $a$  and  $b$  are the lower and upper cutoffs respectively.) A Perishing Monk tells you to assume that  $\gamma > 1$ , that  $a > 0$  always, and allow for the possibility that  $b \rightarrow \infty$ . And then the Monk disappears.

- (a) Determine  $c$ .

**Solution:**

- (b) Why did the Perishing Monk tell us to assume  $\gamma > 1$ ?

Think about what happens as  $b \rightarrow \infty$ .

**Solution:**
